

Voice Games

English pronunciation practice through
voice-controlled mini-games

Fish on! Click the bobber!

Team: Robert Kharisov, Kir Tormasov, Alisa Saraikina,
Timur Rasulov, Ibragim Bulatov

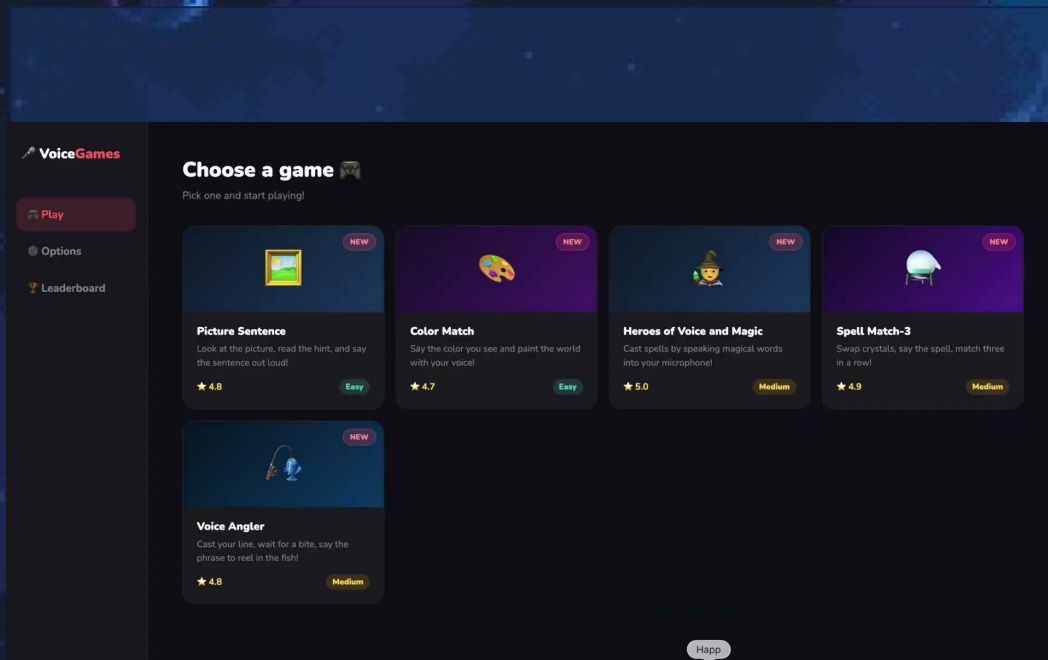

Week 4 Presentation · June 2026

Problem → Solution

Problem	Solution	Stakeholders
Children find pronunciation drills boring and exhausting	Browser-based games with Web Speech API: forced pronunciation, instant feedback	End-users: children 7-12 years Customer: Danila Danko

Turn practice into play: no registration, no backend, just speak and progress

Product DEMO

Color Match – select a color by voice, paint shapes

Heroes of Voice and Magic – turn-based battle, cast spells by pronunciation

Voice Angler – put a rod in, speak the phrase to catch the fish

Spell Match-3 – choose crystals, break them with a spell

Team and roles

Member	Role	Technical responsibilities
Robert Kharisov	Product Owner	Requirements Engineering, CI/CD pipelines, Analytics
Kir Tormasov	Teamlead / Scrum Master	Architecture, Code review, QA coordination
Alisa Saraikina	Developer	UI/UX design, Figma prototyping
Timur Rasulov	Developer	Frontend development, Deployment
Ibragim Bulatov	Developer	Customer relations, Business analysis, QA testing

Priorities and Scope

Must Have

Voice-controlled progression

Visual hints

Auto-save progress

Play without registration

Multiple games

Should Have

View learning progress

Increase difficulty

Non-speech actions

Could Have

Export progress report

Earn rewards/badges

Not in MVP

Backend

User accounts

AI bypass

Customer feedback

Feedback	Our response
"Constantly listening mic is inconvenient"	→ Select-then-speak mechanic
"Pronouncing every tile is tedious"	→ 10-sec auto-paint timer ("dipping brush")
"Chest loot system is slow"	→ Direct loot drops from monsters
"Cartoon style is generic"	→ Pixel art

Roadmap

MVP v1

Web Speech API

Basic UI

2 games

GitLab Pages deployment without backend

MVP v2

Product: Refactor voice mechanics to reduce user friction, integrate dynamic word lists, update UI assets.

Quality & Automation: Establish ISO/IEC 25010 based Quality Requirements, implement automated Quality Requirement Tests in CI, enforce a strict Definition of Done, achieve 30% coverage on critical modules.

MVP v3

Finalize the remaining mini-game prototypes to reach the 10-game goal.

Introduce advanced difficulty scaling for word lists based on player progression.

FUTURE

Parent progress dashboard, visual hints, more complex game mechanics.

Gamification features, advanced phrase processing, and additional games.
